DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by **Gertsek, et**

al. The cited patent discloses a delivery device for the transdermal administration of a substance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 32-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Gertsek, et al., in view of Palasis, and Palmer**. The Gertsek, et al., Patent discloses intradermal infusion using microneedles having a length of 2mm or less and a 15 to 40 gauge range. In relation to the period of infusion, the patent indicates that it can take minutes or hours depending on the particular medication use for infusion into the body. However, Gertsek, et al., does not expressly disclose an infusion period of 10 minutes or less.

Importantly, the Palasis Patent discloses an injection array apparatus using microneedle arrays. The patent expressly discloses infusion periods of 5 seconds to 2 minutes. Accordingly, based on the teachings of the Palasis Patent, for a person of ordinary skill in the art, modifying the infusion periods of the apparatus disclosed by Gertsek, et al., with infusion time periods as disclosed by the Palasis Patent would have been considered obvious design choices.
